

Stories from our Gardeners

"In 2017 was the first year of growing in the Eco Garden System. We were more than pleased and pleasantly surprised of the health, production and speed of the growth of the plants. It was also easy to set up, maintain, and use. Good common sense assembly with great results. We highly recommend for gardeners who want an easy garden or have issues with accessibility – this is the unit to grow in."

JOEY AND HOLLY BAIRD - THE WISCONSIN VEGETABLE GARDENER

The Eco Garden System has not only increased the yield of the edible plants I grow, but it has also allowed me to use a previously unused portion of my property and transform it into a productive raised garden. Thanks to its height, my crops are protected from notorious garden pests. On extremely hot summer days, I don't worry about how my plants will look when I return home from work – the built in water reservoir encourages substantial root growth, creating healthier plants. After a year of using the Eco Garden System, I wouldn't want to garden without one!

JENNIFER MCGUINNESS

"This is the most efficient gardening system EVER! So simple to set up, even easier to maintain, and cost effective to boot! I maintain that home grown vegetables taste better than the store bought varieties. They're probably healthier too since we control exactly what goes into the soil, and use marigolds (as opposed to chemicals) to deter critters."

CHRISTINE

"Gardening has become a family affair, and everyone is actually excited about eating their vegetables now!"
